

A Checklist of the Birds of Shetland

Hugh Harrop & Rob Fray

Checklist of the Birds of Shetland by Hugh Harrop & Rob Fray

This checklist covers the birds recorded in the county of Shetland up until 15 June 2008. Each species is categorised, depending on the criteria for its admission to the Shetland list. Species in category D or category E do not form part of the main list. The definitions of each category are:

Category A = species which have been recorded in an apparently wild state at least once since 1 January 1958.

Category B = species which were recorded in an apparently wild state at least once up to 31 December 1957.

Category C = species which, although introduced by man, have now established a regular feral breeding stock which apparently maintains itself without necessary recourse to further introduction. There are currently only two species in this category on the Shetland list - Mandarin *Aix galericulata* and Ruddy Duck *Oxyura jamaicensis*. None have been introduced to or bred in Shetland, but breed widely on the British mainland. They are all vagrants to Shetland in a sense but have undoubtedly originated from British breeding stock.

Category D = species which would otherwise appear in categories A, B or C except that:

(D1) there is a reasonable doubt that they have ever occurred in a wild state;

(D2) they have certainly arrived with a combination of ship and human assistance, including provision of food and shelter;

(D3) they have only ever been found dead on the tideline;

(D4) they would otherwise appear in category C, except that their feral populations may or may not be self-supporting.

Category E = species that currently have no status on the Shetland list, are historic records now considered not proven, or they are obvious escapes from captivity.

SPECIES STATUS GUIDE

Each species in category A, B and C is prefixed by a status symbol. Capital letters, e.g. R = common resident. Small letters, e.g. w = scarce or local winter visitor.

R or r	Resident. The whole or most of the population remains all year.
S or s	Summer visitor. The whole or most of the population winters out with the area.
W or w	Winter visitor. The whole or most of the population summers out with the area.
M or m	Regular passage migrant
A	Scarce visitor usually recorded annually
V	Vagrant
I	Introduced

Shetland Wildlife *Birding Holidays*

From Phalaropes to Puffins & Bonxies to Bluethroats!

Shetland offers the best birding in Scotland - FACT. Rare and scarce migrants in spring and autumn & between May & July, we are blessed with breeding Red-necked Phalaropes, Great & Arctic Skuas, Storm Petrels, Whimbrels and lots, lots more. Plus the highest density of Otters in Europe, regular sightings of Killer Whales and superb displays of rare sub-arctic flora. Unique, award-winning, bird-filled, island-hopping holidays with no crowds and only the very best resident birders & naturalists as your guides.

Visit our extensive and secure web site or call for our 36-page full colour brochure - packed full of wild ideas!
